                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
```

```
C candidate compound especially a putative pesticidal or pharmaceutical agent that interacts with an invertebrate symporter cell surface receptor protein or its fragment. Insect or worm genetically modified to express protein of the invention is useful for studying invertebrate symporter cell surface receptor protein activity, by detecting the phenotype caused by the expression or mis expression of the protein or the animal. Nucleic acids encoding the invertebrate receptor protein or their fragments are useful as biopesticides. SNF nucleic acids are useful for generating mutant phenotypes in an animal model or living cells that are used to study the regulation of genes encoding the proteins which are useful as pesticide or drug targets. The genetically modified organisms or cells are useful in screening assays to identify pesticides or therapeutics and thus are useful in the identification of new drug targets, therapeutic agents, diagnostics and prognostics useful in treatment of disorders associated with ion channels. The nucleic acid molecules are also useful as hybridisation probes.

The present sequence is a cDNA encoding Drosophila melanogaster (dm) referred as amxing
reterred
as dmKSNF.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01515), expressed DNA sequences (ABL015737-ABB16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23-MAR-2000; 2000US-191637P

New isolated nucleic agenes from Drosophila interactions e acid detection reagent for detecting for elucidating cell signalling 1000 and (cell-cell

Claim SEQ ID NO 17735; 21pp + Sequence Listing; English

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention is

The invention relates to invertebrate symporter cell surface receptors CC of the sodium/neurotransmitter family (SNF) and nucleic acid molecules encoding such receptors. The SNF protein is useful for detecting a CC candidate compound especially a putative pesticidal or pharmaceutical agent that interacts with an invertebrate symporter cell surface receptor protein or its fragment. Insect or worm genetically modified CC receptor protein or it fragment. Insect or worm genetically modified CC express protein of the invention is useful for studying invertebrate symporter cell surface receptor protein activity, by detecting the phenotype caused by the expression or mis-expression of the protein or the animal. Nucleic acids encoding the invertebrate receptor protein or the animal sucleic acids encoding the invertebrate receptor protein or their fragments are useful as biopesticides. SNF nucleic acids are useful for generating mutant phenotypes in an animal model or living cells that are useful as pesticide or drug targets. The genetically modified organisms or cells are useful in screening assays to identify cesticides or therapeutics and thus are useful in the identification of new drug targets, therapeutic agents, diagnostics and prognostics concleic acid molecules are also useful as hybridisation probes.

CC nucleic acid molecules are also useful as hybridisation probes.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLO1840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid genes from Drosophila and interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-MAR-2000;

                  The invention relates to invertebrate symporter cell surface receptor of the sodium/neurotransmitter family (SNF) and nucleic acid molecule encoding such receptors. The SNF protein is useful for detecting a candidate compound especially a putative pesticidal or pharmaceutical agent that interacts with an invertebrate symporter cell surface
                                                                                                                                                                                 Novel invertebrate symporter cell surface receptor proteins and nucleic acid encoding the protein useful as pesticide or drug target and to identify compounds that have utility as therapeutics or pesticides -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC receptor protein or its fragment. Insect or worm genetically modified CC to express protein of the invention is useful for studying invertebrate cymporter cell surface receptor protein activity, by detecting the CC phenotype caused by the expression or mis-expression of the protein in the animal. Nucleic acids encoding the invertebrate receptor protein or the animal. Nucleic acids encoding the invertebrate receptor protein or the manimal. Nucleic acids encoding the invertebrate receptor protein or the animal medal or living comparison of the penetical shapes in an animal model or living cells that are used to study the regulation of genes encoding the cells that are useful as pesticide or drug targets. The genetically modified organisms or cells are useful in screening assays to identify pesticides or therapeutics and thus are useful in the identification of useful in treatment of disorders associated with ion channels. The nucleic acid molecules are also useful as hybridisation probes.

The present sequence is a cDNA encoding Drosophila melanogaster (dm)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01810-ABL16175) and the encoded proteins (ABBD3737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABL03172;

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1840-ABLIG175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of specification, but was obtained in electronic format di at ftp.wipo.int/pub/published_pct_sequences.

capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental blology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for the development of sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                            New isolated nucleic acid
genes from Drosophila and

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic a genes from Drosophila interactions -

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
[ABB57737-ABB72072].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published pot sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 6148 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2492

                                   The present sequence represents the nucleotide sequence of rat glycine transporter 2 (rGly7-2), for use in the present invention. The present invention describes a non-mammalian cell comprising an exogenous nucleic acid sequence encoding a glycine transporter. The invention also describes screening for an enhancer or inhibitor of glycine transporter. The enhancer/inhibitor can be used to treat pain, spasticity, myoclonus, muscle spasm or hyperactivity, epilepsy, stroke, head trauma, neuronal cell death, spinal cord injury, dystonia, Alzheimer's, Parkinson's or Huntington's disease, multi-infarct or AIDS dementia, multiple or amyotrophic lateral sclerosis, attention deficit disorder, organic brain syndromes, schizophrenia or memory or cognitive
